The Greatest Birthday Gift

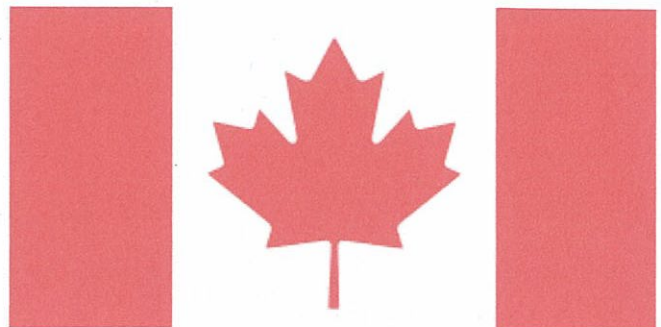

“This year it is the Queen’s 90th birthday and she is now a great grandmother. The greatest gift that Prime Minister Justin Trudeau, and all of us, could give to the Queen would be a way to make life safer and better for her great grandchildren and all the great grand children on our planet.”

**Gran Can. The Gran of Canada.

The Problems of the Blue Planet

Far away in a universe called Asunder lived a flying tortoise called *Gran Main*.

Gran Main was the great grandmother of all Earth, which from far away looked like a blue globe and which Gran Main called the Blue Planet. Life on the Blue Planet only existed because of the water. So, she was called *Main* because, since ancient times, the word for all the oceans and seas of the world had been *Main*.

She was a very special tortoise, with swallow-like wings. Whenever she was needed, she could fly swiftly to the Blue Planet.

Gran Main was very, very wise. She had a blue head, blue body, and a pure white bell-shaped shell with her name on it in blue. Her wings were pure white. She had brown eyes.

Gran Main's purpose was to care for all life on the Blue Planet and to do that she had to care for all the precious water. She cared for the streams, the rivers, the seas, the clouds and the ice and snow. And she made sure that there was always the right amount of each so that life could go on.

Humans were very clever and over many centuries had created their home in the atmosphere of the Blue Planet. She tried to see that the humans of the Blue Planet always looked after it and kept the air, the rivers and the seas clean, so that all the animals and plants could grow together in peace.

However, Gran Main noticed from far, far away that more and more people were spreading over the Blue Planet. The humans were taking more and more space for themselves, and the other animals and plants, with less space to live, were dying.

As the humans spread across the Blue Planet, they made more and more rubbish. They were making the rivers, the sea and the air dirty. The people threw rubbish into the rivers and the sea, and they made the air dirty with the gases from their factories and cars.

Some of the gases were like a blanket around the Blue Planet and they trapped in the heat from the Sun. The Blue Planet was slowly getting warmer and the ice

was melting, changing the balance between the ice, the sea water, the river water and the clouds. And, if that balance was wrong then life would be very different on the Blue Planet. The sea levels would rise and there would be less fresh water to drink and less land to grow food on.

The humans of the Blue Planet had problems and with less water to drink and less land to grow food on, the problems were becoming greater and greater. Instead of working together to solve these problems, the people of the Blue Planet were always going to war, fighting and bombing each other to decide who knew the best way to do things. Somehow the humans had to learn how to work together to recreate the world they lived in.

As the years went by, Gran Main started to worry more and more. She worried so much that she could hardly sleep at night.

She knew, of course, that there would always be problems to solve and that as they were solved then new problems would arise to be solved and that, when they were solved, there would again be new problems to solve. Problems would go on for ever and ever, but there had to be a better way for the people to solve them than fighting and bombing each other. And, with the Blue Planet getting hotter and hotter, as the climate changed, as the sea levels rose and drinking water became scarcer and scarcer, it was becoming more and more important to find a way.

When Gran Main was awake she thought about how she could bring the people of the Blue Planet together to solve their problems. How could she make the people of the Blue Planet think about their great problems, like climate change, clean energy and water shortage, and set out to solve them without fighting each other and killing each other with bombs all the time?

Then one day Gran Main had an idea. What the humans needed was a revolution in the way that they lived - a "Climate Revolution". However, the weapons that they needed had to be very different from those used in wars. They had to be weapons that would inspire all the children and leaders on the Blue Planet to take part. To inspire them to take part in the "Climate Revolution" she would need to make and send "soft power" weapons to the people.

An Idea

Away in Asunder, Gran Main set to work and made a very special tortoise and a very special rabbit. They were her first 'soft power' weapons for the people of the Blue Planet.

Then she flew to the Blue Planet with the very special tortoise and the very special rabbit. On the way there she stopped on the Moon and they looked at the Blue Planet. From the Moon the Blue Planet looked like a very fragile beautiful blue globe set against the blackness of space.

The three sat on the Moon.

"What's the Blue Planet made of?" asked the tortoise.

Gran Main spoke. "Soon you will land on an island on the Blue Planet and there you will find out what it is made of, but the most important thing of all is water, for without water there would be no life at all. The Blue Planet looks blue from the Moon because of all that wonderful water. There is now a great problem with the precious water on Earth and that is why I am taking you there.

"One hundred and fifty years ago, on an island called Great Britain, in Europe, the engineers discovered how to power machines with coal. They made many things for the world, they built ships and railways and sent them around the world. They started the "Industrial Revolution" in Europe and were followed by America. Together, Europe and America are called the West.

"Over the years things became better and better for the people of the West, but as they burned the coal it gave off a gas that stayed high in the atmosphere for hundreds of years. The gases act like a blanket around the planet and the planet slowly became warmer.

"One day China and the East will have their Industrial Revolution and the planet will get even hotter as they burn more and more coal. Industry takes more of the drinking water needed for humans, animals and plants to survive and, if it gets too hot, humans and many animals will not be able to live. We must find a way to help before the humans destroy the wonderful home they have created. It will be a long journey of discovery.

“The British people started the Industrial Revolution and the problem of putting the gases into the atmosphere. They, above all others in the world, have a duty to find a way to solve the problem and share the ideas with the rest of the world. You must help them find a way. What you must do is to start another revolution - the “Climate Revolution”.

“ I am going to take you to a place in Great Britain, where the first passenger railway, powered by coal was started. It’s called Stockton, in the Tees Valley and is a great symbol of the Industrial Revolution. It’s a place on its own, a land “asunder”, which means “apart from”, within Great Britain. From there, I hope that you will learn about life in the West and the world so that we can find a way for the world to solve this great problem and then we will be able to share it with China and the East when they have their Industrial Revolution.

Gran Main picked up the tortoise and the rabbit and swooped down to the Blue Planet. They landed in the backyard of a small house in Stockton in the Tees Valley, close to where the first passenger railway started. The man and woman who owned the house with the backyard were called George and Mary. They were very surprised when they discovered the tortoise and the rabbit in their shed.

The tortoise was very unusual. He was the colours of the Olympic rings. He had a bell-shaped shell, which was red, yellow and blue, a green body and head, and he had blue eyes. On the yellow of his shell and around it were the letters ‘WW’ in black. He had no wings because he was made by Gran Main to move slowly around the Blue Planet, so that he would slowly discover all about it.

The rabbit was also very unusual and, like the tortoise, was also the colours of the Olympic rings. She had a bell-shaped body which was red, yellow and blue. Her legs and head were green, and she had a white tail and brown eyes. On the yellow of her body and around it were the letters ‘WW’ in black. Her ears were red on the outside and yellow on the inside. They pointed to the sky like a V for *Victory* sign.

“What shall we call them?” asked George. “They both have WW on them, so their names must start with W. Let’s call the tortoise Walter and the rabbit we shall call Winnie,” said Mary.

George and Mary took them into their home, where they fostered Walter and Winnie until they were old enough to look after themselves on the Blue Planet.

War and Peace

When Walter and Winnie were very young and still living with George and Mary, Britain went to war with Germany, a great country in the middle of Europe. Great Britain was joined by all the countries of the Commonwealth. England was led by a man called Winston Churchill - some called him Winnie. His mother was American, his father English. Wherever Churchill went he held two fingers in the air making a V for Victory, like that made by Winnie's ears. With his sign, Churchill inspired all the people to "work together" to win.

George had to go away to fight. Walter and Winnie did not see him for six long years. Mary looked after Walter and Winnie, together with her children. It was very hard for her. There was little food. One night, the German planes dropped bombs on Stockton. Some of their friends, in the house next door to where they lived, were killed. Germany attacked Russia and in the East, Japan attacked China and like the people of Great Britain and Russia, the people of China suffered bombing and many people were killed. It was a time of world terror which lived with Walter and Winnie for the rest of their lives.

The people of Russia joined the war and later the United States of America, to help Great Britain, Canada, the Commonwealth and China. It was terrible for all the people, but especially for the people of Russia and China where many millions of people were killed.

Eventually the war stopped and George came home. He became a chimney sweep. At that time there were many chimneys to clean because all the homes were heated with coal fires. They made the air outside dirty and the chimneys very dirty. George always took away every speck of soot and left the houses so clean that he was called *Mr Spotless*. It meant that he always had many sacks of soot to take to the rubbish tip.

Walter and Winnie often helped George by taking the soot to the rubbish tip for him. The rubbish tip was a long way from where they lived, and there was a great hill to climb on the way. The only way to get to the top was by working together. So, as they climbed the hill, they shouted: 'Together! Together! Together!'

Winnie loved her home in Stockton in the Tees Valley and throughout her long life only once travelled outside of the island. She kept a lovely home for all her

children, all her grandchildren, and all her great grandchildren, so that they would come to visit her. All the human children loved her, and she cared for them all. When the children felt unhappy because they hadn't enough money to buy the things they wanted, she told them, "It's nice to buy things but you do not need to buy things to be happy. Happiness is inside you, and you get it by helping others. If you do your best to help others each day, you will always be happy."

Walter loved his home in Stockton in the Tees Valley. He also loved sport, especially water sports. Walter loved making things and doing things. He made canoes and kayaks from wood and canvas and he took part in paddle sport.

It was in the Tees Valley, in the land asunder, that Winnie and Walter started to learn the good and bad things about life on the Blue Planet. But Walter was a restless tortoise and wanted to see the world and learn all about it. He moved all around England and finally to Fladbury, a small village, in the middle of Great Britain.

The Bell Boat

Fladbury lies on the banks of the River Avon between Evesham and Pershore, near to the birthplace of the famous poet and playwright, William Shakespeare. Like Winnie, Walter had children, grandchildren and great grandchildren. When the children felt unhappy because they had not enough money to buy the things they wanted, Walter told them: "It's nice to buy things but you do not need to buy things to be happy. Happiness is inside you, and you get more and more of it by helping others. If you do your best to help others each day you will always be happy. And you also get more and more happiness by making things, doing things, and thinking."

There, in Fladbury on the Avon, Walter met Mr Good, a teacher, who asked Walter to help him with the children. "If the leaders and adults don't inspire and help the children to do good things," said Mr Good, "then our children get into trouble and start destroying things and other people lead them into taking drugs. If you could inspire and help them to paddle, I would be very happy. It will really help our society."

Walter wanted to help society in Fladbury, in Britain and across the globe. He knew that if the problems of the world were to be solved in a peaceful way then

all the people of the Blue Planet had to work together. He often wondered how to do it. Then, by chance, the people of China sent three dragon boats to Britain to race in London, the capital city. With the dragon boats came the story of how dragon boat racing had started over two thousand years before, to celebrate the life of Qu Yuan, who, like Shakespeare in Britain, was China's greatest poet.

Walter realised that there was a way to help people from the East and West to work together to solve the great problems of Earth. All he had to do was to make a special boat that everyone in the world would be happy to go in and, in time, the boats and the story of working together would spread around the Blue Planet. He made a special team boat for the children so that they would learn how to work together.

The boat had a twin hull and was very stable, like the outrigger canoes of Hawaii, so that no-one was frightened to go on board. Walter called it a "bell boat".* When he and Mr Good took the children out on the boats they asked Walter why he had called it a bell boat. Walter always replied, "I called it a bell boat so that you would ask me why. It is of course the shape of my shell."

Then Walter explained why his shape was very important. It was the very first step in understanding statistics, which was very important in understanding science, engineering and technology. Mr Good then explained to the children that Walter's shape meant that they were all very different and special and that they could all use their different talents to take part in solving the great problem of global warming, the climate change that went with it and the problems of water shortages. The children had taken their first step in maths and that made Walter feel very happy, for they had taken a great step in making the Blue Planet fit for them to live in.

The first boat was called the "Spirit of Fladbury and the Climate Revolution" on the bow and on the stern it was called the "Spirit of Mr Good and the Climate Revolution".

The bell boats had three flagpoles. On the bow flagpole were two flags. The top flag on the bow flag staff represented the letter "W" and as a single flag meant, "Urgent Medical Attention Needed". The lower flag represented the letter "E" and as a single flag meant "Changing Course to Starboard".

* See chapters in Walter's Festivals. www.mainacademy.com

The rear flag was ensign flag of Britain. The centre flag was that of the United Nations.

Thus, the signalling flags spelt out the message that “WE, the British crew of the “Spirit of Fladbury and the Climate Revolution”, recognising that our Home on the Blue Planet is in need of urgent medical attention, are joining the “Climate Revolution”, changing course to avoid destroying our home on the Blue Planet, and inspiring the rest of the world to join us.”

The bell boats were Walter’s schools on the water and, because they were safe for people of all ages, everyone could go on them. They used them to hold a regatta which they called the Fladbury-Main Regatta for Our Home on the Blue Planet. The regatta brought people together, every year and those who took part were reminded how, by working together, the people of the Blue Planet could solve their problems in peace.

A Paddle for Life

One evening, when Walter was watching TV, he saw the Speaker of the British Parliament telling a story to children. The Parliament is called the “Mother of Parliaments” because it is the oldest in the world. In it, the members sit on benches facing each other and on the carpet separating the benches are two red lines.

The Speaker explained to the children that the lines were two sword lengths apart and were first put there many years ago when the members of parliament carried swords with them. They had a rule that in debate they could not cross the red line. It was a rule to stop them pulling out their swords and killing each other.

As Walter listened to the Speaker, he realised that he could create a story for the children using a sword and shield. So he made a wooden sword and shield for the children and then made a paddle by turning the shield upside down, joining it to the sword, and cutting off the sword handle. He called it a “Paddle for Life”. Walter made all the paddles the shape of the Chinese dragon boat paddle because the idea of the bell boat came from the Chinese dragon boat. They were made from Baltic Birch plywood and Russian pine.

Walter asked the children to make paddles and then drew designs on them. Their parents and leaders of the community signed the children's paddles, which meant that everyone in the community had a chance to take part. Wood contains carbon and, when trees grow, they take carbon dioxide, the gas causing global warming, out of the atmosphere. The children pledged to keep their paddles for life and planted trees to replace, twice over, the wood they had used. The children had taken their first step in saving the atmosphere, their home on the Blue Planet.

It was very important that the leaders of Britain supported what the children were doing, so Walter asked the prime minister, the Speaker of the House of Commons, their member of parliament and many other leaders to sign a paddle for life to be used as the perpetual trophy for the Fladbury-Main Regatta for Our Home on the Blue Planet. They were all delighted to take part.

So now the children had a 'school on the water', the bell boat, through which they had taken the first step in learning about statistics and they had a paddle for life which was their first step in solving the problem of global climate change. They went on many voyages with Walter and Mr Good and as they did they learned more and more about life and how to make their home on the Blue Planet a better place for all life. Sometimes, they took their parents and leaders of the community with them to share with them what they were learning. They learned together.

Walter, Mr Good and the children even made a large Chinese paddle for life. It was three metres high. They attached to it, two small signalling flags and two large flags, one for another nation and one for Britain. The first of the small flags was for the letter 'W' and also meant 'Urgent Medical Attention Needed'. The second small flag was for the letter 'E' and meant 'Changing Course to Starboard'. On the large paddle it said 'Saving Our Home the Blue Planet with a Paddle for Life'.

They used the large Chinese dragon boat paddle at the start of their voyages and races and took it to the highest peaks of Britain to signal to all the people that 'WE' have an urgent problem and must change our ways and that Britain, inspired by a story from China, have a way of bringing all on board to solve the problem, with a "Paddle for Life".

Walter's School

Walter and Mr Good often took the leaders, the teachers, the parents and the children on voyages on the river on the bell boats, their school on the water. As they paddled, the people often saw the rubbish that they made floating down the river and getting caught in the trees. As they were in team boats, they talked about the problems together, and then decided to clean up the river and the river banks.

There was a great landfill site near to the Avon which they could see as they went to the river. They called it 'Rubbish Mountain' and it grew bigger and bigger each day, so all the people knew about the great problem caused by making more and more rubbish, because they saw it every day.

Out on the bell boat, the leaders, the children, the parents and the teachers talked about how to make less rubbish. Slowly they recycled more and more of their rubbish and less and less went on to Rubbish Mountain. To remind them of the "climate revolution" and to celebrate what they had done in it, each year they held their Main Regattas for Our Home on the Blue Planet. They called them the Main Regattas for Blue Planet because of the importance of the Main - the oceans and seas of the Blue Planet.

Walter also trained the children in the village to become very fit themselves, by bell boating, running, cycling, swimming, kayaking and canoeing, and they became so good that some of them went to the Olympic Games. His favourite saying was, "Well Done!" The children became happier and happier as they made their paddles for life, went out in the bell boat and took part in sport. Because the children did so well, Walter became an Olympic coach for canoe racing and travelled the world with his paddlers. He went to Olympics after Olympics, to Los Angeles, Seoul, Barcelona and Atlanta and his paddlers went on to compete in Sydney, Athens, Beijing and London.

Walter was very happy taking the young people to the Olympics, but he was even happier when he took people paddling in his bell boats with their paddle for life. It was the first step in going to the Olympic heights. It was the first step in going to the heights of Science, Technology, Engineering and Maths. And, the paddle for life was the first step in solving the problem of global warming and climate change. The Olympics were about stopping war and bringing the world together in peace. Some day he would tell that story to the children.

The Olympics Sport and Peace

On a summer day, out on a voyage, the children asked Walter to tell them the story about how the Olympics had started. Walter was delighted.

“In Ancient Greece, the philosophers with wisdom invented the Olympic Games to stop the young warriors going to war,” said Walter. “The Games lasted for hundreds of years, before an evil king brought them to an end. He was a man who had to win at everything and, if anyone beat him at the Olympics, he had them killed. Soon nobody would compete against him.”

“What a silly man,” said Mr Good. “The main purpose in sport is to train and for everyone to take part. Then everyone becomes fit and healthy and everyone is a winner. All those who compete against you should be your best friends, for they help you, by competing against you, to go faster, jump higher, and get stronger.”

“I think that too,” said Walter. “Over a hundred years ago, in a small town in the middle of Britain, called Much Wenlock, near to where the first iron bridge in the world was built, a man called Dr Brookes thought the same. He believed that, to stop young men fighting in wars, they had to be given something else to do. He believed in training for life - education - rather than wars, to make the world a better place.

“Dr Brookes knew all about the Ancient Olympics and decided to start them once more. He invented the Much Wenlock Olympics, and one day the Frenchman Baron de Coubertin visited the games and was inspired by Dr Brookes. Baron de Coubertin went back to Paris and then organised the first Modern Olympics in Athens.

“The Olympics were first held in London in 1908. At the London Olympics, Baron de Coubertin made a famous speech, in which he used the words of an American pastor, ‘*The most important thing in the Olympic Games is not winning but taking part.*’ Today, one hundred years later, that is the lasting memory of those London 1908 Olympics. The buildings that were used are all gone but de Coubertin’s story lives on, still trying to get a message to the world about working together to solve its problems in peace.

“People from across the world are brought together in one city for the Olympics. They have been happening for over a hundred years. Eight thousand young men and women come together every four years to compete, but still the wars continue. Dr Brookes and Baron de Coubertin had a good idea but now, learning from the Olympics and the last one hundred years, I think that we can build on the Olympic idea and do a little better for the 21st century, and that is what we have been working on in Britain for many years.

“Our athletes improve over the years with better ways of training. We must learn from them and continually improve the ways we manage ourselves on the Blue Planet. I think that we need to make it possible for many, many more people from across the world to *Take Part*, so that whenever they solve their problems they not only think of themselves but think about all the people of the world.”

“How do we DO IT?” asked the children.

“That’s easy,” said Walter. “ We can do it with our Main Regattas for Our Home on the Blue Planet, which any village, town and city, can hold, wherever there is water, like the Chinese dragon boat festivals, which have been held for over two thousand years in China”

The Main Regattas for Our Home on the Blue Planet

“Tell us more about the Main Regattas for Our Home on the Blue Planet,” said the children.

“I have called them the “Main Regattas for Our Home on the Blue Planet” so that the humans will realise that it is their home that they are destroying.

“The Main Regattas for Our Home on the Blue Planet are different from the Olympics,” said Walter. “They have the same aim of bringing people of the world together to stop wars and solve their problems in a peaceful way but it is something that every village, town, city, across the world, wherever there is water, could do every year. They try to do what Dr Brookes and Baron de Coubertin meant the Modern Olympics to do; to stop wars and solve our problems in a better and more peaceful way. But the Main Regattas mean that millions of people across the Blue Planet can take part.

The Olympics happen only every four years, which means that all the eyes of the world are on them when they happen. It makes us think about what they are held for. But we need to be working on what it means every day, week, month and year in between the Olympic years. The Olympics and the Main Regattas are different but work together to achieve the same aim, just as all the world has to work together if we are to solve our greatest problems in peace.

“The centrepiece of the Olympics is the track, on land, and it is mainly for young men and women. The Main Regattas are different. Life cannot exist without water. It is the most important thing on the Blue Planet, so the centrepiece of the Main Regattas, like the Chinese dragon boat festival, is the water. And, because we now have a boat which ALL can take part in, the Main Regattas are for all, children, parents, grandparents, great grandparents and teachers.

“Britain is made up of people from across the world and their families and friends live in every country on the Blue Planet. All we have to do is to hold a regatta for them and the community, where all who take part, make a paddle for life and pledge to keep it for life. They then tell all their family and friends around the world the story of how the people of the world can come together to solve the great problems like water shortage and climate change.

“If those family and friends inspire the community in their towns and cities to make their paddles for life and hold a Main Regatta for Our Home on the Blue Planet, the message of how to solve our greatest problem will spread around the world.

“People from all over the Blue Planet can make themselves fit and make the Blue Planet fit for them to live in. If towns and cities, throughout the world take part, then soon there will be many millions more people taking part than take part in the Olympics.

“It has taken one hundred years to bring together, every four years, eight thousand young people from two hundred and two nations of the world for the Olympics. In China and now across the world millions of people take part in the dragon boat festivals. If, wherever there is a dragon boat festival or other water festival, all the children make a paddle for life and take part in a bell boat regatta, I think that in eight years we could be doing what those who started the Olympics tried to do.

“The Olympics have shown the way in the 20th Century, but with our knowledge now we can do much better for the 21st Century. And I am sure that in the 22nd Century someone will think of an even better way. It’s called continual improvement!

“I am sure that the paddle for life ideas, the bell boats and the Main Regattas for the Blue Planet will spread around the whole world. It has to, if humans are to survive and live in peace and harmony. In life, often when there is a need, something happens that we have never thought about. It arrives, ‘out of the blue’ to change everything.

“The people of the Blue Planet need something new to bring them together to solve their great problems, and you can help. When you make a paddle, go out on a bell or dragon boat, or take part in a regatta all you need to do is to let all your friends across the world know about it using the world wide web and soon you will have given all the world a new way of solving their problems.”

From Asunder

From Asunder, Gran Main watched what Walter was doing. She had always hoped that Walter would find a different way of bringing people together to solve their problems. From far away in the universe of Asunder, she saw what was happening in Fladbury and she thought about how she could help make it happen all over the Blue Planet.

Gran Main was wise, like those Grans on the Blue Planet who listen to their grandchildren and are always ready to learn, no matter how old they are. Grans have learned of the past through their parents and grandparents and, if they listen, they learn about the future from their children and grandchildren. They are in the middle of life. The good Grans, like Gran Main, care about the past and they care about the future.

Gran Main knew many Grans in Asunder and they often talked together about caring for the Blue Planet and helping the people who lived there by bringing them together to solve their problems in a better way. Gran Main called a meeting of all the other Grans in Asunder, for every village, town, city and country on the Blue Planet had a Gran. Gran Main told them what she saw was happening on the Blue Planet.

“The West has solved many problems and has made life better for many of its people, through its great industries, fuelled by oil and coal and it is now the richest civilisation on the Blue Planet.

“China, India and the East are now following the way of the West with their own Industrial Revolution. As the people live longer and use more and more coal and oil, new problems have arisen. As people make more, and buy more, more and more rubbish is created and more gases from its industries are making the Blue Planet warmer than ever before. The climate is changing, the great oceans of the world are changing, and changing where water falls on the Blue Planet. The sea levels are rising and fresh drinking water is becoming scarcer. It is making it more and more difficult for humans, animals and plants to live.

“Humans have created what they thought was a wonderful home for themselves in the atmosphere of the Blue Planet but it is now going very wrong. We have to inspire the humans to use their cleverness to clean up their world so that it better for them and all other life.

“Many years ago I flew Walter and Winnie to the Blue Planet from Asunder, hoping that they would learn about the Blue Planet and its great problems and think of a way to solve them so that the ideas would be ready when China and the East had their Industrial Revolution.

“Walter has learned about life on the Blue Planet as he has travelled around the world going to the Olympics. Winnie has learned how to care for the children of the world by looking after the children of the Tees Valley, in Great Britain, in Europe.

“Learning from the Chinese dragon boat, Walter has invented new bell boats which he uses to bring the leaders, teachers, children, politicians and parents of Britain and their friends from other countries together, to talk about and to solve their problems, especially water shortage and climate change, in a way in which they think about the whole Blue Planet. Winnie has stayed at home and cared for all her children, grandchildren and great grandchildren.

“Walter and Winnie have had long lives. They are now wise enough to set out to try and inspire the people of the Blue Planet with their ideas of how to manage themselves in a better way and to make the Blue Planet a better place for all life. I think that I should fly to the Blue Planet to bring Walter and Winnie together again.”

All the Grans were delighted for they all cared about the Blue Planet.

“We agree,” they all said, “you must fly there straight away”.

Then the Gran of China spoke out. She was called Gran Chi. She had a pure white shell and white swallow shaped wings, a yellow head and a red body. Her eyes were brown and her name was written on her shell in red letters.

“I’m proud that they have used a Chinese story and a Chinese paddle for life to bring all the children of Britain and their friends in the West on board to solve the problems of the world in peace and harmony. That is what China was trying to do by holding the Olympics in Beijing in 2008.

“We must make sure that all the world knows about the Chinese paddle for life, the bell boats, the dragon boats and the Main Regattas for Our Home on the Blue Planet. Now that the Olympic Torch has left Beijing we can give China and the whole world our Chinese paddle for life, so that all can *take part*, as Baron de Coubertin wanted, in solving the world’s problems in peace and harmony. It will become the legacy for all the Olympics in future.”

Gran Main spoke. “It’s very important that we in Great Britain bring China and the United States, and the world together to solve the problems of climate change. But we have not much time if we are going to save our home the Blue Planet. I think that you, Gran Chi must come with me to help to to the job.

“We must fly to see Walter and Winnie to bring them together again so that they can help and inspire all the people of Britain, China and America to *Take Part* as soon as possible. We must fly to the Blue Planet today.”

So, Gran Main and Gran Chi waved good-bye to the Grans of Asunder and flew off to the Blue Planet and Stockton in the Tees Valley to talk to Winnie.

Winnie and Walter: Working Together

Gran Main and Gran Chi found Winnie lying in a small hollow in the ground near to the banks of the River Tees in Stockton. They flew down and perched on the edge of the hollow. Winnie was most surprised to see them.

Gran Main told Winnie about the problems facing the people of the Blue Planet and how their job was to care for them, just as Winnie had cared for the people of the Tees Valley. She told Winnie about Walter and how he had been inspired by a story from China to make his bell boats and his Chinese paddle for life. She told her about Walter's travels around the world to the Olympics with the children he had helped and inspired. She asked Winnie to come together with Walter to help the West and the world to take part in the revolution for the survival of the humans on the Blue Planet.

Gran Chi spoke to Winnie. "Your ears are very special. They are a sign of victory, like Churchill's two fingers, and we need a sign to say we will have victory over the problems on the Blue Planet when we all 'Work Together!' When people see you on board with Walter they will shout out, 'WE ALL WIN WITH WALTER and WINNIE'."

"I would love to help you and to use my ears as a sign for victory," said Winnie. "I will be delighted to meet Walter again. We will work together and bring the West and the East together to make the Blue Planet a better place."

"Many of the children I have cared for in the Tees Valley have grown up. I thought that I would not be needed in the future. I was getting tired lying here. Now you have given me a new purpose. My spirit is getting stronger by the minute. Let's GO DO IT!"

"Wonderful," said Gran Chi, "We will fly you to Walter straight away."

So Gran Chi took Winnie in her arms, and they flew off to meet Walter.

In Fladbury, Walter was sitting on a tree stump on the riverbank of Shakespeare's Avon, beside the bell boats, making a paddle for life from the branch of a willow tree. Gran Main, Gran Chi and Winnie landed, 'out of the blue', on the branches of the tree above Walter. Walter was most surprised to see them and was very, very happy to see Winnie again.

Gran Main and Gran Chi told Walter that they had brought Winnie to help him to take his bell boats and the Chinese paddle for life ideas all around the West and the East to bring the people together to solve their problems in a better way.

Gran Chi talked about the Olympics and the great opportunity that they brought to bring Baron de Coubertin's dream to reality. Walter was delighted

and they sat together for hours talking about what to do. Then they went to bed and slept, dreaming about the ideas.

Gran Am

The next morning, Gran Main, Gran Chi, Walter and Winnie met to talk about what to do.

“We have watched from Asunder what you have been doing in Britain,” said Gran Main. What we believe we should do is hold Main Regattas for Our Home on the Blue Planet in the United States and China as soon as we can and have a special paddle for life for the United States and China, as the prize for the winner of the Main Boat Race for the Blue Planet, which will be for the children.”

“That’s a brilliant idea,” said Walter. “I will be delighted to make very special paddles for life for the United States and China.”

Gran Main spoke. “Once Walter has made the paddles, we will fly Walter and Winnie across Britain to inspire all her leaders to sign the paddles for the United States and China. I’m sure that they will all be delighted to take part.”

Walter soon made the Chinese paddles for life and Gran Main flew Walter to meet the Prime Minister and many other leaders of Britain. They had all signed the paddle for life for Fladbury and they were all delighted to take part again and sign the paddles for the United States of America and China. With the paddles for life signed by the British leaders Gran Main called Walter, Winnie and Gran Chi together.

“We now have all the things we need to inspire America and China to come on board and work together to solve the great problem of climate change, but we will need the Gran of America, Gran Am, to fly Walter and Winnie to America. We will also need someone to carry on our work in Britain whilst we are away. I will ask Gran Flad, the Gran of Fladbury to help us. I will go back to Asunder and bring them back here.”

So Gran Main flew back to Asunder to bring back Gran Am and Gran Flad to Fladbury.

The Voyage to America

Soon Gran Main had flown to Asunder and brought Gran Flad, who had the same colouring of Gran Main, and Gran Am, who had a red body and blue head, to meet Winnie Walter and Gran Chi at Fladbury on Shakespeare's Avon. The first thing they did was to go out on in the "Spirit of Fladbury and the Climate Revolution", so that they would all get to know each other. As they paddled together they talked.

"Many people in Britain know about the paddle for life, the bell boats and about all working together to solve the problems of water shortage and climate change," said Gran Main. "But, whatever Britain does, it will have little effect. Without the United States and China taking part the Blue Planet will carry on getting warmer and warmer. We must first try and find a way of inspiring the United States and China to take part."

"That's great," said Gran Am. "I have just been asked to make a speech at Purdue University in Indiana in the United States. I will fly Walter and Winnie there and we will speak about how the United States can lead the way for the world to solve the problems caused by climate change. Purdue is a great engineering university and I think that as Walter is an engineer he should speak for us."

Walter was delighted. Purdue University is known as the cradle of astronauts. It is where Neil Armstrong, the first man on the Moon was trained and it is twinned with the great Chinese university of Tsinghua in Beijing. Gran Am flew Walter, Winnie, two bell boats and the paddle for life to Purdue University. The students and professors were delighted to take part, but in Indiana there were many people who did not believe that humans were responsible for global warming and the leaders of the university did not wish to offend them, so were not happy to take part. Walter realised that Purdue and Indiana could never lead the way.

However, when Walter spoke at Purdue University, the leader of Winona, in Minnesota, was there and he listened to what Walter was saying. He invited Walter, Winnie and Gran Am to take the bell boats, the paddle for life and the ideas to Winona. They were delighted to do so.

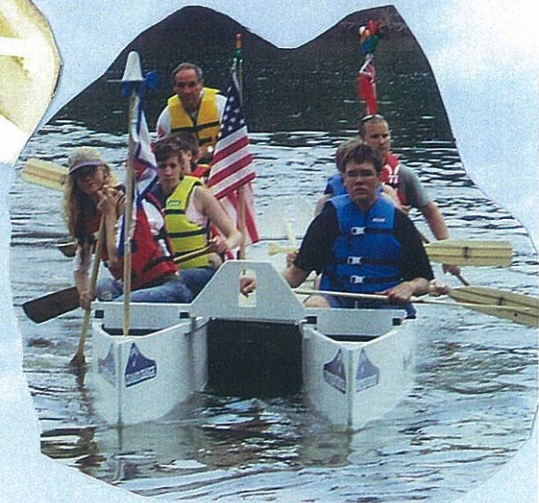

Tippecanoe Inspiring Indiana to Climb on Board

The “Spirit of the United States and Climate Change”, flagship of the American Fleet, was first launched on the Wabash on Memorial Day, Monday 29th May 2006, by Professor Cindy Tomovic and David Train, in memory of David Orczyk.

First to climb on board was Adriane Tomovic. With the one Bellboat we held the first Tippecanoe/Purdue-Main Regatta for the Blue Planet and later set off on the first two miles of the Tippecanoe/Purdue-Main Voyage for the Blue Planet.

Engineering students take stroke toward saving planet

By BETH STUTSMAN

bstutsman@journalandcourier.com

At first, freshman Brianna Owens wasn't sure about David Train's idea of changing the world by building canoes.

But at the completion of the Purdue University freshman Engineering Project in Community Service (EPICS) course, Owens realized what Train, a former British Olympic canoe coach and former British National Canoe Champion, is trying to do.

"I started to see his vision," she said. "Preventing global warming made us want to do more as a class as a whole — not just us — everybody."

Train, the founder of Main Academy Global, is a visiting professor at Purdue from England. In England, his agency works with young children to teach them about teamwork, leadership and environmental issues.

During the fall semester at Purdue, he brought those same concepts to 28 freshman engineering students, who partnered with Main Academy America through EPICS to build a Liberty Bell Boat. Students celebrated the completion of the boat Thursday.

A bell boat is a stable, canoe catamaran that requires cooperative paddling.

David Train talks Thursday in West Lafayette about his "Paddles for Life" project that is meant to teach young people about community and environmental issues.

By Michael Heinz/Journal & Courier

It has become part of many schools' curriculum in England to use Bell Boats as teaching tools.

It's Train's vision that the whole world start teaching children how to take care of the Earth through his program, and he believes it can only be accomplished if the United States leads the way.

He said if President George W. Bush would make this a priority, "within 15 years the world will have got on top of the problem. Without America, our (English) scientists say, humankind is dead."

Bill Oakes, associate professor of engineering, said Train taught the students how to think about the long-term effects of designing products and how to choose materials that can be recycled.

"Engineers can impact other things," Oakes explained.

"David Train definitely had a strong idea and a big goal coming in," engineering freshman Nick Landowski said.

Landowski is satisfied with the canoe the class made.

"Satisfied with actually building it, but the idea it stands for makes it more worthwhile," he said.

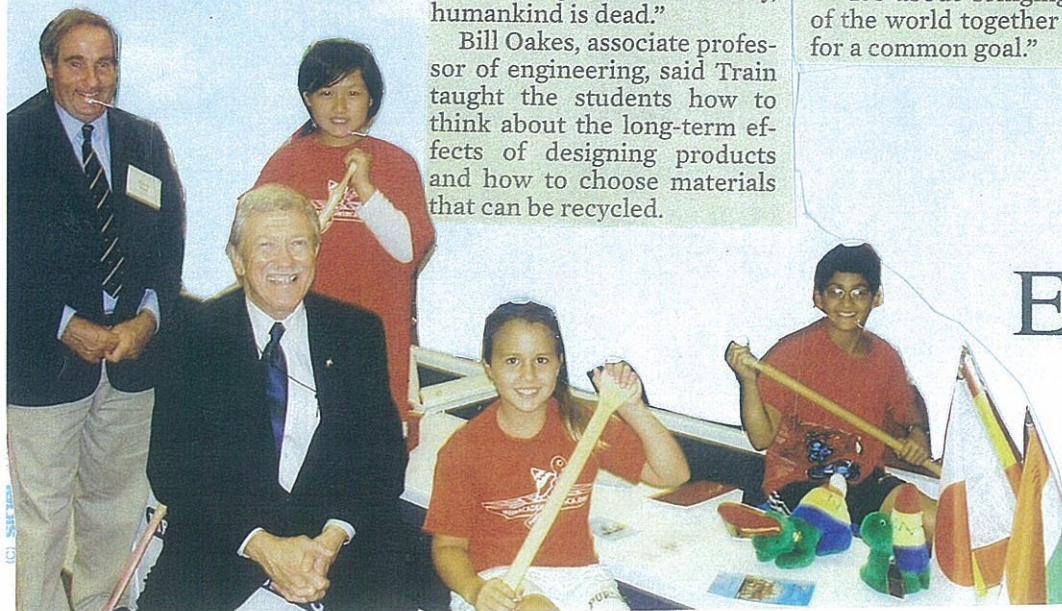

That idea, according to Landowski, is specifically about global warming for Train, but for him it's larger.

"It's about bringing people of the world together to unite for a common goal."

Children from China, America and India on board the "Spirit of the United States and Climate Change" at the Purdue Energy Summit 2006 with Martin Jischke, then President of Purdue University.

This booklet shows HOW TO inspire the children and people of China, America and Britain to climb on board. Next to India, Africa...

Engineering Inspiring All On Board.

Minnesota Inspiring America and the World to Climb on Board

Tim Pawlenty

The "Spirit of the United States and Climate Change" was launched on Winona Lake at the Dakota Homecoming in June 2006. On the 7th November 2007, the City Manager of Winona, Eric Sorensen, signed the Paddle for Life, together with students of Winona State University.

The paddle returned to England where it was signed by Tony Blair, when Prime Minister, together with many other British leaders. The Paddle for Life was sent back to Winona in October 2007 and in November 2007 the Governor of Minnesota, Tim Pawlenty signed the paddle. Governor Pawlenty is the Chair of the Governors Association of the United States. It was later signed by Will Steger the Polar Explorer.

On 7th December 2007 students in outdoor education from Winona State University raised their large Paddle for Life on the bluffs overlooking Lake Winona and the Mississippi. They signalled to America that we have a great problem with climate change but we can solve it if we all climb on board, with our Paddle for Life. In September 2007 Winona was badly affected by floods. It will use the Winona-Main Boat Races and Regatta for the Blue Planet in 2008 as a rebirth celebration after their devastation.

It is hoped that other Governors will be inspired by Governor Pawlenty and the CommuniVersity of Winona to leap on board the "Spirit of the United States and Climate Change" and implement the "Minnesota Model" throughout the United States.

Winona and Minnesota Taking Part

Chad Uhl Winona.
Governor Tim Pawlenty

Miller Mayor of Winona,
Eric Sorensen, city
manager. May 2008

US Representative Tim Walz and
Mayor of St Paul, Chris Coleman

United States Senator
Amy Klobuchar
December 2008

The people of Winona inspired the governor of Minnesota and the US senators of Minnesota to sign their paddle for life. They organised the Winona-Main Regatta for our Home on the Blue Planet Festival and three thousand people went out in the bell boats. They said that they would do so every year.

At first, it seemed that Winona and Minnesota might inspire the rest of America and the world to take part but the more Walter and Winnie learned about the United States the more they realised that Winona and Minnesota would have have a very hard job to bring it about.

America is the richest country on the Blue Planet and the people have had a good way of life for many years. Many people do not see why they should get involved with the rest of the world. In WW2 America did not join the war until their way of life was threatened by the attack by the Japanese on Pearl Harbour. Only when Russia put Sputnik into space did the Americans see the threat to their way of life and then decide to lead the way into space.

It seemed to Walter and Winnie that, despite what was happening in Winona and Minnesota, that the United States would never work together and put their great scientific and engineering might to solve the problem of climate change unless they felt that some other country was creating a better world which would last longer and be a better world than theirs.

They had gone to America with great hope, but as they returned to Britain they were really worried that the problems of climate change would never be solved. They were worried that, once more, wars would start and the world would again be threatened as it was during the World War when Walter and Winnie were young. It was a terrible thought. They would have much to tell Gran Main, Gran Chi and Gran Flad when they returned to Fladbury.

Invitations to China

As always, when Walter, Winnie and Gran Am returned to Fladbury they went out in the bell boat, "Spirit of Fladbury and the Climate Revolution", so that they could talk, listen and decide what next to do.

Walter spoke. "We had a great time in the United States", he said. "But, despite the efforts of our friends in Winona, we do not think that the United States can lead the world in solving the problem of climate change. There are just too many leaders who believe that there is no need for change.

CHINA

Inspiring All the World On Board

President Hu Jintao leading the Chinese people in planting trees at the Olympic Park on April 1st 2007. It is part of an annual tree planting programme. If President Hu Jintao could be inspired to:

*Sign the Beijing Paddle for Life to launch the ideas in China.

*Inspire all the children of China to make their Paddle for Life, pledge to keep it for life and plant trees, taking their first step part in sinking carbon.

It would be a huge 'leap' forward for humanity and in the creation of a world story, with the Chinese Dragon Boat Paddle as the 'brand', to help and inspire all the children of the world to 'leap' on board and take part in solving the climate change problem.

"Ruan Quanli"
(“Soft Power”)

HE. Mme Fu Ying, the Chinese Ambassador, after signing the Chinese Paddles for Life and being presented with GranChi, Walter and Winnie, the “Ruan Quanli” tools to help save our planet. She said that she would try her very best to inspire President Hu Jintao to “Take Part”. Just one step off the world story of how we Saved Our Home The Blue Planet!!

London April 28th 2008

“We have always looked to the United States to lead the world and now it seems that they won’t. Gran Am, Winnie and I are are very worried. We believe that with no world leadership, the problems caused by global warming will lead to many conflicts and even another world war.”

“I disagree,” said Gran Chi. “China is now becoming the greatest industrial power in the world and her leaders do not deny that they have a problem with climate change, water shortage and all the other environmental problems. They know that there is a great need for change throughout the world.

“The president of China has made many speeches saying that China will lead the way in solving the problems, and has said that the way to do it is to get the ideas of emission reduction deep into the hearts of all the people.

“The bell boats, the Main Regattas and the paddle for life are designed to do just that and we can help the president of China get the ideas deep into the hearts of all the children, people and leaders of China.

“Every year we have dragon boat festivals across all of China. It is our second most important festival. If we had an event for the children and parents, where they took part in a Main Regatta for Our Home the Blue Planet, as part of the dragon boat festivals, then soon everyone in China would be taking part and all the world will know.

“I am sure that if the president of China knew about the Walter’s ideas he would be delighted to take part and sign paddles for life for races in China. Our most important task is to try every way that we can to get the paddle for life and the ideas to the President.

“How are we going to that?” said Walter.

“I think that the first thing to do is to inspire the Chinese ambassador in Britain to sign the paddle for life we have for China, said Gran Chi.” “I will write and ask her to do so.”

It was not long before Gran Chi had a reply from the Chinese ambassador, who said she would be delighted to sign, and invited Gran Chi, Gran Flad, Walter and Winnie to the Chinese embassy in London.

"I'm proud that they have used a Chinese story and a Chinese Paddle for Life to bring all the children of the United Kingdom, and their friends in the West on board to solve the problems of the world in peace and harmony, which is what China was trying to do by holding the Olympics. We must make sure that all the world knows about the Chinese Paddle for Life, the Bell Boats, the Dragon Boats and the Main Regattas for the Blue Planet. Now that the Olympic Torch has left Beijing we can give the whole world our Chinese Paddle for Life, so that all can Take Part, as Baron de Coubertin wanted, in solving the world's problems in peace and harmony."

Gran Chi Page 16

Andrew Train: Teacher and Coach Fladbury Paddle Club. Five times Olympian and former world marathon champion, he is leading the Paddle for Life project in Wychavon and Worcestershire. Seen here holding the Olympic Torch in one hand and the Paddle for Life in the other at the Chinese Embassy, London April 28th 2008

The Chinese ambassador was a very pleasant, quietly spoken lady with a beautiful smile. She was delighted to meet Walter, Winnie, Gran Flad and Gran Chi and gave them an Olympic torch from the Beijing Olympics to hold together with the paddles for life. In their right hand they held the Olympic torch, which has been lit in Greece, the centre of Western civilisation which had given the Olympics to the world. In their left hand they held the Paddle for Life, symbol of Chinese civilisation, the oldest on the Blue Planet.

The ambassador said that the Chinese president loved children and she was certain that if he knew how they and a story from Chinese history could help to bring the world on board to solve its greatest problems, he would be delighted to take part. She promised to do her very best to get the message to the president. The ambassador told them that the best way to make sure the Chinese president knew about the ideas was to get the British Queen, because she was the head of the state, to sign the paddle for life.

After listening to the Chinese ambassador, Walter wrote to the British Queen and asked her to sign a Paddle for Life for Beijing, but she had to say no, because the rules did not allow it. Walter and Winnie were very sad, for the British Queen, at the stroke of a pen, could have inspired the Chinese president to take part and that would have started the "Climate Revolution, but they did not give up.

They asked the Chinese ambassador if she would send the Paddle for Life, which she and the Prime Minister of the Britain had signed, to the mayor of Beijing. She was delighted to do so and sent it to the mayor of Beijing, who signed the Chinese Paddle for Life and sent the ideas to the mayors of the cities of Penglai and Weifang. The mayors were very proud of the history of Beijing, Penglai and Weifang and thought they were the very best places in China to launch the ideas that had been inspired by the story of Qu Yuan. The mayors of Penglai, Weifang and Beijing quickly sent invitations to Gran Chi, Walter and Winnie to visit Penglai, Weifang and Beijing.

They were delighted. Gran Main immediately flew to Asunder to ask the Grans of Penglai, Weifang and Beijing who were called Gran Pen, Gran Wei and Gran Bei to join them in Fladbury. They were all coloured like Gran Chi.

As always, they went out on the "Spirit of Fladbury and the Climate Revolution", but this time with a full crew of eight paddlers and one helm.

Gran Main took the helm with, Gran Am, Gran Chi, Gran Bei, Gran Pen, Gran Wei, Gran Flad, Walter, Winnie paddling.

Gran Main spoke. "It seems that the only way humans will now survive on the planet is if China leads the way with these English ideas. All ideas have a time and place. We know that this is the time and so the place where the ideas start in China is very important. We have had an invitation from the mayors of Penglai, Weifang and Beijing, so I have asked Gran Pen, Gran Wei and Gran Bei here to tell us all about their cities."

They stopped the boat to listen to Gran Pen, Gran Wei and Gran Bei.

Penglai, Weifang and Beijing

Gran Pen was the first to speak. She had a pure white shell and white swallow shaped wings, a yellow head and a red body. Her eyes were brown and her name was written on her shell in red letters.

"Penglai is a very historic place in China. It is called the Water City, or Water Fortress, and is beside the ocean. It has a Secret Harbour. It has Naval Museum with many ancient ships and boats. It is in Shandong Province, where Confucius was born and it is part of Yantai which has a famous school for the deaf.

"It was from Penglai where the fabled Eight Immortals set out floating over the ocean and where the first Chinese emperor sent off five hundred boys and girls on ships, to the east, to look for islands of immortality. Because of this two Chinese emperors have visited Penglai.

"Penglai is one of China's top tourist attractions and more than two million people from China visit it each year. There can be no better place in the whole of China for getting the president's message to all in China and all across the Blue Planet. From Penglai, China can share our great history with all the world and use it to ensure the immortality of human civilisation."

Gran Pen sat down and Gran Wei quickly stood up and started to speak. Like Gran Pen she had a pure white shell and white swallow shaped wings, a yellow head and a red body. Her eyes were brown and her name was written on her shell in red letters

“Weifang is a very important place in China. Like Penglai, it is in Shandong Province, where Confucius was born. Here, beside the Bohai Sea, we are building the new water city of Binhai. We call it the “Venice of China”.

“It is a great technological and manufacturing centre and has many festivals. It is the world centre for Kite Flying. At our festivals we have Dragon Boat Racing and we take part in the Dragon Boat Festival every year.

“If all the eight year old children of Weifang made a Paddle for Life, planted trees and took part with their parents and teachers in the Weifang-Main Regatta for the Blue Planet as part of the Dragon Boat Festival and we had a Paddle for Life signed by our president and mayor as the perpetual prize, all of China would know about how Chinese history could save the Blue Planet and civilisation. All the children and people of China would be very proud of what they were doing for the world.

“Then, if we had the bell boat racing, with our children, parents and teachers at our International Kite Surfing competition then all the world would find out about the ideas.

“Weifang is one of the cities of the Bohai Sea Economic Ring and the Shandong Peninsula Blue Economic Zone, where a marine economy is being built. With the children on board with their powerful world symbol of a paddle for life, in the decades to come the Bohia Sea and the Shandong Blue Zone could become an environmental model known across the world. The gondola is a symbol of Venice. The bell boat could be the symbol of Blue Economic Zone and the greatest world model of the Main Regatta for the Blue Planet

“From Weifang, as from Penglai, China can can share our great history with all the world and use it to ensure the immortality of human civilisation.”

Gran Wei sat down and Gran Bei quickly stood up and started to speak. Like Gran Pen and Gran Wei she had a pure white shell and white swallow shaped wings, a red body and a yellow head. Her eyes were brown and her name was written on her shell in red letters.

“I think that it would be wonderful to launch the ideas in Penglai and Weifang for both of them have great histories, which can be used to take our message to

The “Soft Power Tools” needed by China to bring all the World on board

the world, but I believe, if our aim is to inspire the president and leaders of China to take part that we must launch the ideas in Beijing.

“Beijing is the capital city of China. The president and all her leaders live there on the banks of a beautiful lake, which would be a brilliant place to hold voyages and regattas for the children and families.

“The 2008 Olympics focussed the minds of all the world on Beijing. I am sure that if we held the Main Regatta for Our Home on the Blue Planet in Beijing, at the time of the Dragon Boat Festival, and all the children of Beijing made a paddle for life and planted trees to replace the carbon, all the people of China would want to take part.

As Gran Bei sat down all the crew clapped and cheered.

“That’s wonderful.” said Gran Main. We must now make sure that we inspire the mayors of Penglai, Weifang and Beijing to help us to save their home on the Blue Planet. Let’s GO DO IT!

A Voyage to China

The future of the whole of human civilisation now seemed to rest on Penglai, Weifang and Beijing. Walter, Winnie, Gran Main and Gran Chi knew how important it was to make sure that the president of China would one day launch the bell boats and ideas in China.

Once more they wrote to the British Queen asking if she would sign a Paddle for Life for the president of China. Once more they were told that the British system did not allow it, no matter how great the cause. But they did not give up.

They thought what next they could do and wrote to the prime minister of Britain and asked him to name three bell boats for China. He was delighted to take part. He was also delighted to sign two more paddles for life for Penglai, and Weifang.

The prime minister named three bell boats, the “Spirit of Qu Yuan and The Climate Revolution”, for Penglai, Weifang and Beijing and wished Walter, Winnie and Gran Chi a very good voyage to China.

Taking Part

"Dragon Boat Racing was founded by the collective acts of people to save the life of one man, Qu Yuan, in China 2,500 years ago. It is very fitting that the Chinese Dragon Boat paddle is now being used to inspire all humanity to climb on board with their Paddle for Life to collectively pull together to save humanity and civilisation."

Within a few weeks, Gran Chi, Gran Pen, Gran Wei and Gran Bei, flew Walter, Winnie, the three bell boats and the paddles for life to China.

The bell boats and the ideas were first launched at a meeting for future world leaders, on a beach by the Bohai Sea. Children from Penglai schools and the School for the Deaf took part with the future world leaders in a truly wonderful ceremony. The mayor signed the Penglai Paddle for Life and students from the university took part in a race and were presented with the perpetual trophy. It was then hung in the Penglai museum, so that all the people of Penglai could see it.

The mayor was delighted and promised to inspire all the children and people of Penglai to take part in an annual event and put the idea of all working together to solve the great environmental problems deep into people's hearts. The children and people of Penglai gave Walter, Winnie and the Grans great hope and inspiration to carry on with their voyage.

Gran Pen stayed in Penglai to help the mayor to inspire all the children and people of Penglai. Walter, Winnie, Gran Main, Gran Chi and Gran Wei flew two bell boats and the two remaining Paddles for Life to Weifang-Binhai. Weifang-Binhai is the centre for kite surfing in China and the day that Walter and Winnie arrived there was the opening ceremony of their International Kite Surfing competition.

It was a huge and colourful occasion with thousands of spectators. The children took part in the opening ceremony together with all the kite surfing competitors from nations around the world. The mayor signed the Weifang Paddle for Life and the children took part in a race and were presented with the perpetual trophy. It was then hung in the Weifang-Binhai museum, so that all the people of Weifang and the world could see it.

The mayor of Weifang was delighted and promised to inspire all the children and people of Weifang Binhai to take part in an annual event and put the idea of all working together to solve the great environmental problems deep into people's hearts. The children and people of Weifang and the world's kite surfers gave Walter, Winnie and the Grans great hope and inspiration to carry on with their voyage.

Gran Wei stayed in Weifang-Binhai to help the mayor whilst Walter, Winnie, Gran Main and Gran Flad flew to Beijing, the capital city of China.

The mayor said that, like Gran Bei, he believed that there was no better place to take the Chinese president's message to China and the world, and that he thought it would be wonderful if the president of China one day signed the Beijing Paddle for Life and launched, the "Spirit of Qu Yuan and The Climate Revolution", with the children of Beijing and then signed Paddles for Life for the president of the United States and other world leaders.

Walter agreed. "When we met the Chinese ambassador in London, she told us that the best way to get the president of China to sign the Paddle for Life was to get the British Queen to sign it because she, like your president, is the head of the state. We have tried many times to get that to happen but the rules in Britain do not allow her to do so. However, I am sure that we will find another way get these British ideas to your president. We have to, for if we don't, many many millions of people will die in the years to come.

"I believe we need to ask all the Grans in Asunder to help. We need to use the brains of everyone on the Blue Planet for victory in the Climate Revolution, and we need to use the brain of all the Grans if we are to get the ideas to the president of China."

"I agree", said Gran Main. "We must all fly back to Asunder and talk to all the Grans of the Blue Planet".

Back in Asunder

Back in Asunder, Gran meeting called a meeting of all the Grans.

Gran Main spoke. "It's wonderful to be back with you all again. We had a great time in China and we now have high hopes that one day the Fladbury and British ideas will be used by the leaders of China, but we have a great problem and we need to discuss it with you with great urgency. We need your help.

"To spread the ideas quickly throughout China we need to get them into the hands of the president. When the Chinese ambassador signed the Paddles for Life in London she told Walter and Winnie that the best way to make sure the Chinese president knew about the ideas was to get the British Queen, because she was the head of the state, to sign the Paddle for Life.

“Walter and Winnie have tried many times to inspire the British Queen to sign the paddle for the president of China, but they always get the same answer - ‘the rules do not allow it, no matter how great the cause’. But we must find a way if we are to save the humans on the Blue Planet from destroying the very home that they live in.

“Somewhere on the Blue Planet is a leader of a nation who can get the ideas into the hands of the president of China. Who would like to volunteer?”

All the Grans put their hands up to say that they would help.

“I think that we should first of all send a few Grans to the Blue Planet and then learn from their experiences before you all go”, said Gran Main. If you will let me be the “coach” I will select a crew to take part.”

All the Grans agreed and Gran Main selected Gran Sing for Singapore, Gran Kaz for Kazakhstan, Gran Russ for Russia, Gran Pak for Pakistan, Gran Ind for India and Gran Can for Canada. She also selected Gran Lit and Gran Ger for Europe, but because the EU was not a nation. She asked them to work with all the Grans of the EU and bring them together into a crew for Europe.

Gran Main wished them all well and asked them do everything that they could to find a leader who would help them to get the ideas to the president of China and then fly back to Asunder.

They all flew off to the Blue Planet and started to ask the leaders for their help. All the leaders they spoke to said that they thought the ideas were great and most were happy to sign a Paddle for Life for their country. The president of Lithuania became the first president and head of state on the Blue Planet to sign a Paddle for Life.

A Paddle for Life was signed by the Russian ambassador for the president of Russia and the ambassadors of Kazakhstan and Germany signed, as did the presidents of the EU and whenever they signed their Grans asked them if they would inspire their prime ministers or head of state to inspire the president of China to sign their paddle for them.

But, none of the Grans managed to get it to happen and they all felt that they had failed the children of the Blue Planet. Eventually, they all returned to

Asunder and reported back to Gran Main, saying that they were very sorry for failing to achieve what they had set out to do.

Gran Main listened and then called a meeting of all the Grans, so that the Grans that had been sent to the Blue Planet could tell them all about what had happened. They were all disappointed that not one of the Grans had managed to inspire the leader of their country to get their leaders to get the ideas to the president of China. Then Gran Main spoke.

“There’s no need to be sad and disappointed,” she said. “What we must do is to learn from what happened, see if we can improve on what we did, and then we must try again”. We must never ever give up. So let us all think about what we are doing wrong and then we might be able to find a better way.”

So they all went into small groups and discussed what had gone wrong and then they had a meeting of all to tell the others what they thought. There were many ideas but then Winnie spoke.

“The group that I was in thought about many things but we believe that we know what is going wrong. All the leaders that we have met have been happy to sign a Paddle for Life for us, but they do not have the time to really understand what it is all about.

“Perhaps none of the leaders have paddled in a bell boat. Perhaps none of the leaders have been out in a Dragon Boat. Perhaps none of the leaders have been out with the children and teachers on voyages or taken part in regattas. Perhaps none of the leaders have made a Paddle for Life and above all perhaps none of them have felt the happiness that the children, teachers, parents, and grandparents feel by taking part.

“We have all taken part and know all about the ideas. Whatever questions people ask us about them we can answer them, and are very happy to do so.

“It’s very different for the leaders. With so many other things to do, they don’t have the time to learn and take part in what we are doing, so, if they were asked a question they would not know what to say and it would be embarrassing. We do not like to be embarrassed and it’s exactly the same for our leaders. It would be very embarrassing for them to take the ideas to the president of China and then not to be able to answer any questions that he asked.

“It would also be bad for these ideas, because, without the right answers, from someone with the knowledge and experience, the president of China would not be inspired and would not pass them on to all the children, teachers, parents and grandparents of China.”

“You are absolutely right.” said Gran Main. “It is a huge problem, in getting any new ideas to the leaders of any organisation, when they do not have the knowledge and experience. But one day perhaps there will be a leader on the Blue Planet who does have the experience, the knowledge, and the confidence to take the ideas to the president of China.

“The problem of global warming will not go away, ever now. The “Climate Revolution” could last for hundreds of years and after that the humans will have to take care of their home for evermore, so we must keep on searching.”

There was a great silence amongst the Grans and then, from the back of the meeting the Gran Can, the Gran of Canada stood up and spoke. She had a red head, red body, and a pure white shell with her name on it in red. She had brown eyes. All the Grans turned round to listen.

Justin Trudeau:A Birthday Gift to the Queen

“There is now a new president in China”, said Gran Can. “The new president has led the way in working together with America to bring all the world together and on board and working together to tackle the climate change problem. He has led to the whole world agreeing, in Paris, that they must all work together to solve the problem.

“I accept that the British system does not allow the British Queen to take part and sign a Paddle for Life for the president of China but we also have new prime minister in Canada, Justin Trudeau, who I am sure would be delighted to help. Whilst he is not a head of state he does have many meetings with the president of China, and he would in no way feel embarrassed to talk to him about how paddle sport can save our home on the blue planet, for he has been a canoeist all his life. He was taught by his father, Pierre Trudeau whose name is known throughout the world as a world statesman and peace maker.

“Justin Trudeau loves canoeing and the single blade paddle, canoeing lies at the very root of Canadian culture. He will be delighted to tell the president of China how the single blade paddle can be the symbol, and a huge soft power weapon, to

President Dalia, signing the Paddles for Life and receiving an earlier version of the story, at the time of the Lithuanian presidency . Brussels 2013.

propel and steer the world to a new and better future. He will also be delighted to tell the president of the United States how a boat inspired by Hawaiian culture can be used to bring all the world on board and working together to solve humanities greatest problem.

“The Queen is the head of state of Canada and Canada is a very important member of the Commonwealth. This year it is the Queen’s 90th birthday and she is now a great grandmother. The greatest gift that Justin Trudeau, and all of us, could give to the Queen would be a way to make life safer and better for her great grandchildren and all the other great grand children on our planet. For that to happen we must find a way for Justin Trudeau to get the ideas that have been invented in Great Britain into the hands of the president of China.

“Walter and Winnie have already given bell boats and Paddles for Life to Penglai, Weifang and Beijing but what the Chinese president now needs is a story telling him what it is all about. What we must do is to write the story for him, and then Prime Minister Trudeau can send it as a gift to the Chinese president.

“If Justin Trudeau, as a birthday gift to the Queen, sent the story to the president of China he would be sure to find out. The president of China would then know all about the ideas and I am sure that he would be delighted to give them to America all the other nations on our planet. Everyone can take part. Together, WE CAN DO IT!”

By now all the Grans were standing and cheering Gran Can. She had given them all hope and they knew that now they would be victorious in bringing all the world on board to fight in the “Climate Revolution”.

Gran Flad stood up. “Thank you for your brilliant speech. It gave us all hope. When we get back to Fladbury, Gran Chi, Winnie, Walter and I will write the story as a gift to the the president of China and you Gran Can, must come with us to find a way to inspire Justin Trudeau to send the story to the president of China. “Together, WE CAN DO IT!”

She waved her ears in the air, like Churchill’s “V” sign and all the Grans cheered and shouted “Together, WE CAN DO IT!”

Gran Main, stood up to speak.

“We must say, ‘Bon Voyage and Good Paddling’ to Gran Can, Gran Chi, Gran Flad, Walter and Winnie. On their way back to the Blue Planet they must plant four Paddles for Life on the Moon, carrying the flags of Canada, China, the United States and Great Britain, to give a vision to all on the Blue Planet of what we are trying to do.”

With all the Gran’s shouting ‘Bon Voyage and Good Paddling’, Gran Chi, Gran Can and Gran Flad picked up Walter and Winnie and waving the four Paddles for Life in the air, they flew off and in a flash were on the Moon. They planted the flags and then flew back to Fladbury

Back on The Blue Planet

Back in Fladbury Gran Flad, Gran Chi, Gran Can , Walter and Winnie sat down together and wrote the story that they would send as a gift to the president of China. It is this story!

They then invited the Canadian ambassador to visit Fladbury and launch the “Spirit of Canada and the Climate Revolution” on the waters of Shakespeare’s River Avon. He was delighted to do so and spoke to all the schoolchildren of Fladbury, Pershore and Evesham about the very special friendship that Canada had with Great Britain.

The Canadian ambassador launched the “Spirit of Canada and the Climate Revolution” where it joined the “Spirit of China and the Climate Revolution” on Shakespeare’s River Avon. The children gave the ambassador the story written by Gran Flad, Gran Chi, Gran Can, Walter and Winnie for the president of China and he promised to give it to Justin Trudeau.

Within a few days the Prime Minister had read the story. He was delighted when he realised how his great love of paddlesport could be used to love the world’s greatest problem in peace. He immediately sent it off to the president of China, thanking him for China’s great history, for helping to bring the countries of the world together, and for the story of Qu Yuan. He also sent it off to the president of America. He asked both of them if they would sign the Paddles for Life, already in China and America and send him a photograph of themselves with their Paddle for Life, so that he could inspire all the leaders of the Commonwealth to take part.

Within a few weeks the president of the United States had read the story. He was delighted that an Hawaiian type boat was being used to carry a message around the world, as he was born in Hawaii, and he immediately sent it off to the president of China, with his thanks for the way Chinese history was being used to make the world more secure for all its future generations. He then signed the Winona Paddle for Life, already in America, and sent a photo of himself, grasping the paddle to Justin Trudeau.

The president of China was delighted to read the story and delighted that the Chinese Dragon Boat paddle was being used to take his message around the world. He inspired all the children of China to make their own Paddle for Life and to plant trees to replace the wood that they had used. He inspired his leaders to sign Paddles for Life to be used as trophies for regattas. He then had a factory built to make bell boats for the people of China and the world. He then signed the Beijing Paddle for Life, already in the museum in Beijing and sent a photo of himself grasping the paddle, to Justin Trudeau.

The president then gave a Chinese Paddle for Life to all the leaders of the world and to each nation he gave two bell boats, the story and all the ideas.

The first bell boat was always named the "Spirit of China and the Climate Revolution" and on the stern the "Spirit of Qu Yuan and the Climate Revolution", so that all the world would learn about China's great and long history.

The second bell boat was named for the nation that it was being given to, with a name on the stern about some individual who had played a great part in that nation's history. The bell boat for Canada was named the "Spirit of the Canada and the Climate Revolution" and on the stern the "Spirit of Pierre Trudeau and the Climate Revolution" so that all the nations of the world would know the name of the prime minister's father and what he had done to bring peace to the world.

On the stern for Germany was the "Spirit of Winfrid and the Climate Revolution". On the stern for America was the "Spirit of John Winthrop and the Climate Revolution". On the stern for France, was the "Spirit of Baron de Coubertin and the Climate Revolution". On the stern for Pakistan was the "Spirit of Noah and the Climate Revolution", and so it went on. Each and every nation had a story to tell to inspire its children to use it to create a better future.

More than 100 sixth form students learned about the current issues of climate change from three US embassy representatives. (s)

Discussing a current topic

A TRIO of representatives from Britain's US embassy have visited Pershore High School to educate students on the effects of climate change.

Ed Heartney, Isabella Kuliga and David Hartnoll spoke to the school's sixth form students about the current issues of climate change and how they can be combated.

The visit was inspired by an article in The Times written by American Ambassador Mathew Barzun last

December about the special relationship between the UK and USA in reducing climate change.

David Train, a former Olympic canoeing coach from Fladbury, then sent a letter to Mr Barzun telling him about his bell boats the school use as a sustainable way to help tackle the problem.

Headteacher Clive Corbett said: "Almost every one of our pupils has taken part in bell boating. The bell

boat was inspired by Hawaiian culture so I'm sure President Barack Obama, an Hawaiian, would be delighted to learn from Ambassador Barzun we use that type of boat.

"Ed Heartney told more than 100 students Ambassador Barzun is passionate about spreading the message of the special relationship we share with the US. It was a very well attended and interesting session for all concerned."

TOGETHER WE CAN DO IT!

The British designed “Soft Power Weapons” for the United States of America to inspire all in the world on board and working “together” to tackle the climate change problem. President Obama’s legacy!

“If you want to go fast go alone; if you want to go far, go together.”
Matthew Barzun. US Ambassador to Britain. The Times 5th December 2015

Soon all the world had bell boats, all the world's children went on Main Voyages for their Home on the Blue Planet and took part in Main Regattas for their Home on the Blue Planet.

Finally, one day, the president of China sent two bell boats as a birthday gift to the Queen of Great Britain. On the stern of the British bell boat was the "Spirit of Winston Churchill and the Climate Revolution".

The British Queen, delighted with her gift, asked her grandson to launch the two boats, invented in Great Britain and now made in China, on the waters of Shakespeare's Avon at Evesham. The town is famous as the town where the father of representative government died in the Battle of Evesham, some 750 years ago, defending the parliamentary cause against the Monarch. Now parliament, the Monarch, and all the people of Great Britain, thanks to Justin Trudeau, could take part in helping China and America to inspire the whole world on board to tackle the greatest problem ever to face humanity.

Using their great histories, China and America soon brought the world on board to tackle its greatest ever problem - and all who took part enjoyed doing it. China and America, with a small gift from Great Britain presented to them by Justin Trudeau, brought happiness and hope to all the people of the Blue Planet.

On Asunder, Gran Main looked down and smiled with the beaming smiles of the Queen and Justin Trudeau, as she saw what was happening. For the first time since she had flown Walter and Winnie to the Blue Planet, eighty years before, Gran Main felt that there was now great hope for a safer and better life for the humans and all other life on the Blue Planet. Thinking of what prime minister Justin Trudeau, Canada, and the Commonwealth had done for the people of the Blue Planet, she felt very, very happy.

That night she slept soundly in her bed.

Reflections on the Olympic bell-boat relay

The Vale of Evesham School decided to mark Olympic year in a special way. There was never any doubt in my mind that bell-boating would be centre stage.

click on the Olympic link to see lots of images.

The full story of this journey can be found on the Canoe England website.

After working with many Worcestershire schools, we wanted to share an Olympic legacy with Worcestershire children and across the world, particularly in China – hosts of the 2008 Olympics.

Stoke Mandeville – birthplace of the Paralympics was the logical starting point; it is in Aylesbury, which has its own canal, a six mile arm off the Grand Union Canal.

A successful application to Get Set, the official London 2012 education programme meant we were recognised as a Plan Your 2012 School, along with only 150 others across the country.

On February 20th, The Mayor launched the head of the bell-boat fleet, The Spirit of Penglai and Sustainability. We travelled six miles and 14 locks from Aylesbury to the Grand Union Canal carrying our Mandeville Paralympic mascot, as well as Walter and Winnie the bell-boat mascots symbolising the importance of 'working together' and 'taking part'.

The next leg on 9th March saw us paddle into Birmingham, having journeyed up the Grand Union Canal to Kingswood, then along the Stratford-upon-Avon Canal to King's Norton, joining the Worcester and Birmingham Canal into Gas Street Basin. One boat now became two as The Vale was joined by a second boat paddled by children from Lickey Hills Primary School.

A week earlier, students from The Vale completed the other 'arm' of our relay - Ironbridge to Stourport, designed to include Much Wenlock, the Shropshire village where Dr Brookes planted the seed for the modern Olympic movement.

After Birmingham, the fleet increased to six bell-boats, involving schools in the locality. Sixty children from Greenfield Primary School, Stourbridge completed a stage, followed by schools from Hagley District, Kidderminster and so on.

There are too many stages to the journey to recollect them all. The journey continued right through to the end of June. Ninety Worcestershire schools, around 3,000 children and 500 adults, took part. Along the way, we held six regattas.

One of the key parts of our Get Set project was running helm courses for teachers, around 70 of whom took up the offer. This will also form part of our legacy as more schools will have the capacity to run their own bell-boating clubs.

Our journey made China's national news websites and one of the boats involved is now been in China. Chinese children will paddle from the Eric Liddell (Chariots of Fire) Memorial Garden in Weifang to a new 'water' city site – the 'Venice' of China.

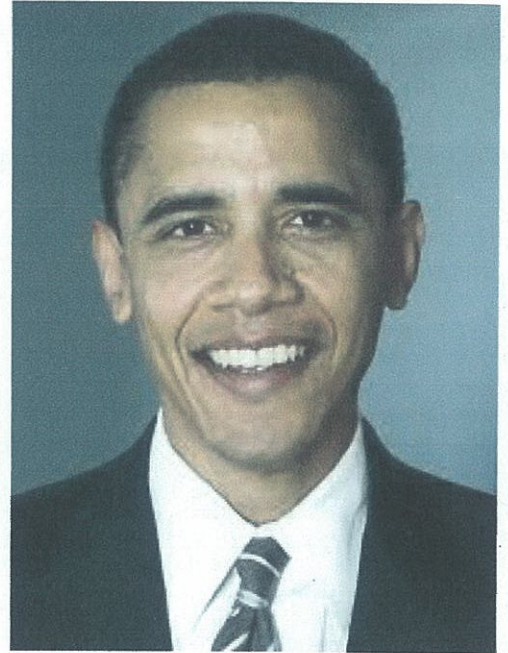

Hopefully, the messages behind the bell-boat, our Olympic legacy, will continue to spread.

“Dear Prime Minister Trudeau,

Thank you for sending me the story. I have written to President Xi, thanking him for the part played by the great history of China and for China’s greatest soft power gift to the world, of a Paddle for Life, shaped in the form of the Chinese Dragon Boat paddle.

I have signed the Winona Paddle for Life as you will see in the enclosed photograph. Thanks again.”

President Barack Obama.

“Dear Prime Minister Trudeau,

Thank you for sending me the story. I have written to President Obama thanking him for the way an Hawaiian boat is being used to bring all the world on board to tackle the greatest problem facing humanity.

I will be delighted to give all the world leaders a Paddle for Life, the story, boats and ideas, starting with the leaders of the G20. I am delighted to send you a photograph of me grasping the Beijing Paddle for Life, which I have now signed.

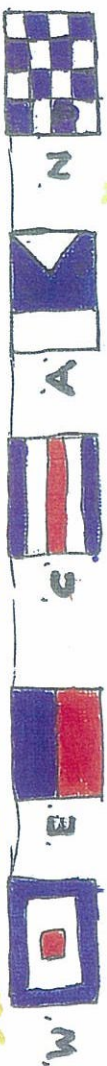

Thank you again for making me aware of these British designed ‘soft power weapons’. We will use them to bring harmony to the world.”

President Xi Jinping.
